

Stratum C Menopause Spot Relief

Spot Relief

Reduces inflammation...

Anti-bacterial action and powerful actives eliminate the appearance of blemishes

Natural elements...

Uses essential elements Sulphur and Zinc Oxide to balance pH levels and reduce redness

Overnight relief...

You only need to apply to the affected area so not to dry out the entire face – between 1 and 3 overnight uses will reduce unsightly spots

Just when you thought spots were a teenage problem, menopause comes along. Hormone changes are the source of both problems and it is thought that 70% of women going through the menopause will suffer some sort of breakout.

Most treatments for acne and spots are based on drying agents in face washes that remove oil and grease from the entirety of the face. The problem is that menopausal skin is thinner and drier and needs those oils and nutrients.

We created a powerful, overnight spot relief lotion that combines Salicylic Acid (a commonly used ingredient in most spot or acne treatments) with Sulphur and Zinc Oxide. The Sulphur acts as a pH stabiliser, reducing the acidic environment and reducing inflammation. Zinc oxide helps to regulate the skin by reducing redness and swelling.

Stratum C Menopause Spot Relief oxidises in air forming a pink powder

on the site of the spot. For that reason the active ingredients are stored under liquid to protect them. You will be tempted to shake the bottle, but DON'T! Take a cotton bud and dip it into the pink sediment at the bottom and apply only to the affected spots and leave overnight - washing off in the morning. It may take a few applications but your spots will be gone while the rest of your skin stays healthy and hydrated.

Ingredients:

Purified Water, Isopropyl Alcohol, Colloidal Sulphur, Zinc Oxide, Salicylic Acid, Magnesium Aluminium Silicate, Camphor, Iron Oxide.

Sulphur is an essential element and is used in Stratum C Spot Relief to reduce inflammation
